

**UNIVERSITY OF MISSISSIPPI**  
Department of Physics and Astronomy  
Graduate Electromagnetism I (Phys. 721) — Prof. Leo C. Stein — Spring 2024

**Graduate Electromagnetism I Syllabus**

---

|                 |   |
|-----------------|---|
| Class schedule: | MWF 0900–0950, Lewis 109  |
| Office hours:   | TBD   |
| Course website: | <a href="https://duetosymmetry.com/teaching">https://duetosymmetry.com/teaching</a> |
| Professor:      | Leo C. Stein (he/him; you can call me “Leo” or “Dr. Stein”)                         |
| Email:          | <a href="mailto:lcstein@go.olemiss.edu">lcstein@go.olemiss.edu</a>                  |
| Office:         | 205 Lewis Hall  |

---

Accessing homeworks/exams will be through [Blackboard](#). If you are in this course and do not have access to the virtual classroom, email Leo ASAP!

## Texts

There is no required textbook for this course. However, for your own studies and reference, I recommend getting a standard text. There are lots of options, e.g.

- Schwinger et al., *Classical Electrodynamics*.
- Jackson, *Classical Electrodynamics*.

I list some additional references:

- Wald, *Advanced Classical Electromagnetism*. Better treatment of point particles, the self-force, and some other topics than most texts.
- Griffiths, *Introduction to Electrodynamics*. An undergraduate textbook but very easy to follow.
- Thorne and Blandford, *Modern Classical Physics*. Very comprehensive ( $\sim 1500$  pages) covering much more than electrodynamics. Includes intro to magnetohydrodynamics and plasma physics. PDFs of pre-publication notes currently available at <http://www.pmaweb.caltech.edu/Courses/ph136/yr2012/>.
- Sturrock, *Plasma Physics*. Specialist text, but starts from scratch and I found it easy to follow.
- PDFs available online from Russell Herman (UNC Wilmington); David Tong (Cambridge); Philip Nelson (UPenn); Richard Fitzpatrick (UT Austin); Alan Guth (MIT)

## Course goals and learning outcome

This is the second half of a standard course on electromagnetism in the graduate curriculum for physics.

Key concepts (time permitting): • vector calculus and index gymnastics, • methods for electro/magnetostatics, • Green’s function methods, • static multipole expansion, • radiative multipole expansion, • special functions, • tensor methods, • Liénard-Wiechart potentials .

Goals: Understanding of electro- and magneto- statics and dynamics; relevance to physical systems; strengthen tools of vector/tensor calculus; applying multivariate/tensor calculus and special mathematical tools (e.g. Green’s functions and the multipole expansion). These goals are to enhance students’ mathematical reasoning, critical thinking, and analytical reasoning.

## Evaluation

|                  |  |
|------------------|--|
| Grade type:      | Letter grade A–F   |
| Grade ranges:    | (subject to change) <ul style="list-style-type: none"><li>• A: 88% and up</li><li>• B: 75–87%</li><li>• C: 65–74%</li><li>• D: 55–64%</li><li>• F: &lt;55%</li></ul> |
| Grade breakdown: | (subject to change) <ul style="list-style-type: none"><li>• 50% Homework</li><li>• 20% Midterm</li><li>• 30% Final</li></ul>   |

## Homework, tests, and final exam

Homework assignments will be announced via Blackboard, and they must be turned in by the stated time on the due date. Late homework will be penalized 20% per day (exceptions and extensions permitted with good cause). Homeworks and exams may be physically handed in, or submitted digitally via Blackboard. Homework must be easy to read: please clearly write down your name and the problem set number, do not use a red pen. The midterm and final exam will be open-book and open-notes, and a calculator will be permitted.

## Attendance

There is no strict attendance requirement, but you are strongly advised to attend class. Attendance has a strong correlation with performance. I recommend that you read the book sections in advance and come ready to participate. If you miss an exam or cannot turn in homework, please inform me beforehand and get a doctor's note if applicable. Absences from tests count as zeros, unless they are justified. If you must be absent during a test for a University sponsored event, you must discuss this with me before the test date.

## Academic Integrity

Violations of the University's policy of academic integrity will result in a failing grade and other disciplinary actions. A student with a documented case of plagiarism or cheating in this course will receive a failing grade for the course and may face disciplinary action by the University, including expulsion.

In particular, do not turn in problem set solutions copied from online or a solutions manual. Copying solutions does nothing to enhance your learning. If I see this then you will get an automatic 0 for the problem set. If it happens more than once I will report it to the chair of the department.

## Disability Access and Inclusion

The University of Mississippi is committed to the creation of inclusive learning environments for all students. If there are aspects of the instruction or design of this course that result in barriers to your full inclusion and participation, or to accurate assessment of your achievement, please contact the course instructor as soon as possible. Barriers may include, but are not necessarily limited to, timed exams and in-class assignments, difficulty with the acquisition of lecture content, inaccessible web content, and the use of non-captioned or non-transcribed video and audio files. If you are approved through SDS, you must log in to your Rebel Access portal at <https://sds.olemiss.edu> to request approved accommodations. If you are NOT approved through SDS, you must contact Student Disability Services at 662-915-7128 so the office can: 1) determine your eligibility for accommodations, 2) disseminate to your instructors a Faculty Notification Letter, 3) facilitate the removal of barriers, and 4) ensure you have equal access to the same opportunities for success that are available to all students.

## **Other**

If a change in the syllabus becomes necessary during the semester, it will be discussed in class and then posted on the course website. The course website will also contain up-to-date information on the class schedule, homework assignments, and complementary material.

## Schedule (subject to change)

|                        |     |     |             |  |
|------------------------|-----|-----|-------------|--|
| M                      | Jan | 22  | Lecture 01: | (Campus closed from snow)  |
| W                      | Jan | 24  | Lecture 02: | (Campus closed from snow)  |
| F                      | Jan | 26  | Lecture 03: | Admin. Overview. Maxwell's Eqs.                                  |
| M                      | Jan | 29  | Lecture 04: | Index notation basics  |
| W                      | Jan | 31  | Lecture 05: | (Electro)Statics: Basics   |
| F                      | Feb | 02  | Lecture 06: | Gauss's law and Ampère's law                                     |
| M                      | Feb | 05* | Lecture 07: | (Electro)Statics: Uniqueness                                     |
| W                      | Feb | 07* | Lecture 08: | (Electro)Statics   |
| F                      | Feb | 09  | Lecture 09: | Method of images   |
| M                      | Feb | 12  | Lecture 10: | Method of images   |
| W                      | Feb | 14  | Lecture 11: | Delta functions and Green's functions                            |
| F                      | Feb | 16  | Lecture 12: | Separation of variables  |
| M                      | Feb | 19  | Lecture 13: | Basis expansions   |
| W                      | Feb | 21  | Lecture 14: | Legendre polynomials, spherical harmonics, Fourier               |
| F                      | Feb | 23  | Lecture 15: | Reduced Green's functions  |
| M                      | Feb | 26  | Lecture 16: | Reduced Green's functions  |
| W                      | Feb | 28  | Lecture 17: | Variation of parameters  |
| F                      | Mar | 01* | Lecture 18: | Electrostatic multipole expansion (Legendre polynomial version)  |
| M                      | Mar | 04  | Lecture 19: | Electrostatic multipole expansion (spherical harmonic version)   |
| W                      | Mar | 06  | Lecture 20: | Electrostatic multipole expansion (spherical harmonic version)   |
| F                      | Mar | 08  | Lecture 21: | Tensor symmetries  |
| Mar 09–17 Spring Break |     |     |             |  |
| M                      | Mar | 18  | Lecture 22: | Electrostatic multipole expansion (tensor version)               |
| W                      | Mar | 20  | Lecture 23: | Effective sources and magnetostatic multipole expansion          |
| F                      | Mar | 22  | Lecture 24: | Magnetostatic multipole expansion                                |
| M                      | Mar | 25  | Lecture 25: | Energy/forces/torques on dipoles                                 |
| W                      | Mar | 27  | Lecture 26: | Interaction of dipoles and multipoles                            |
| F                      | Mar | 29  |             | Good Friday – Holiday  |
| M                      | Apr | 01  | Lecture 27: | Magnetostatics and induction                                     |
| W                      | Apr | 03* | Lecture 28: | Displacement current; electrodynamics                            |
| F                      | Apr | 05* | Lecture 29: | Gauge transformations; radiative Green's function                |
| M                      | Apr | 08  | Lecture 30: | Radiative Green's function                                       |
| W                      | Apr | 10  | Lecture 31: | Retarded Green's function; Jefimenko's equations                 |
| F                      | Apr | 12  | Lecture 32: | Liénard–Wiechert potentials                                      |
| M                      | Apr | 15  | Lecture 33: | $E$ and $B$ fields from L–W potentials; charge in uniform motion |
| W                      | Apr | 17  | Lecture 34: | Energy in radiation and conservation                             |
| F                      | Apr | 19  | Lecture 35: | Dipole radiation   |
| M                      | Apr | 22  | Lecture 36: | Radiative multipole expansion                                    |
| W                      | Apr | 24  | Lecture 37: | Radiative multipole expansion                                    |
| F                      | Apr | 26  | Lecture 38: | Radiative multipole expansion                                    |
| M                      | Apr | 29  | Lecture 39: | Vector spherical harmonics                                       |
| W                      | May | 01  | Lecture 40: | Vector spherical harmonics                                       |
| F                      | May | 03  | Lecture 41: | Radiation using vector spherical harmonics                       |
| May 06–10 Final exams  |     |     |             |  |

\*=Leo has another responsibility (e.g. travel). So far, this schedule is just a suggested order.
